A message from DS Identity and the Beyond Ventures Team

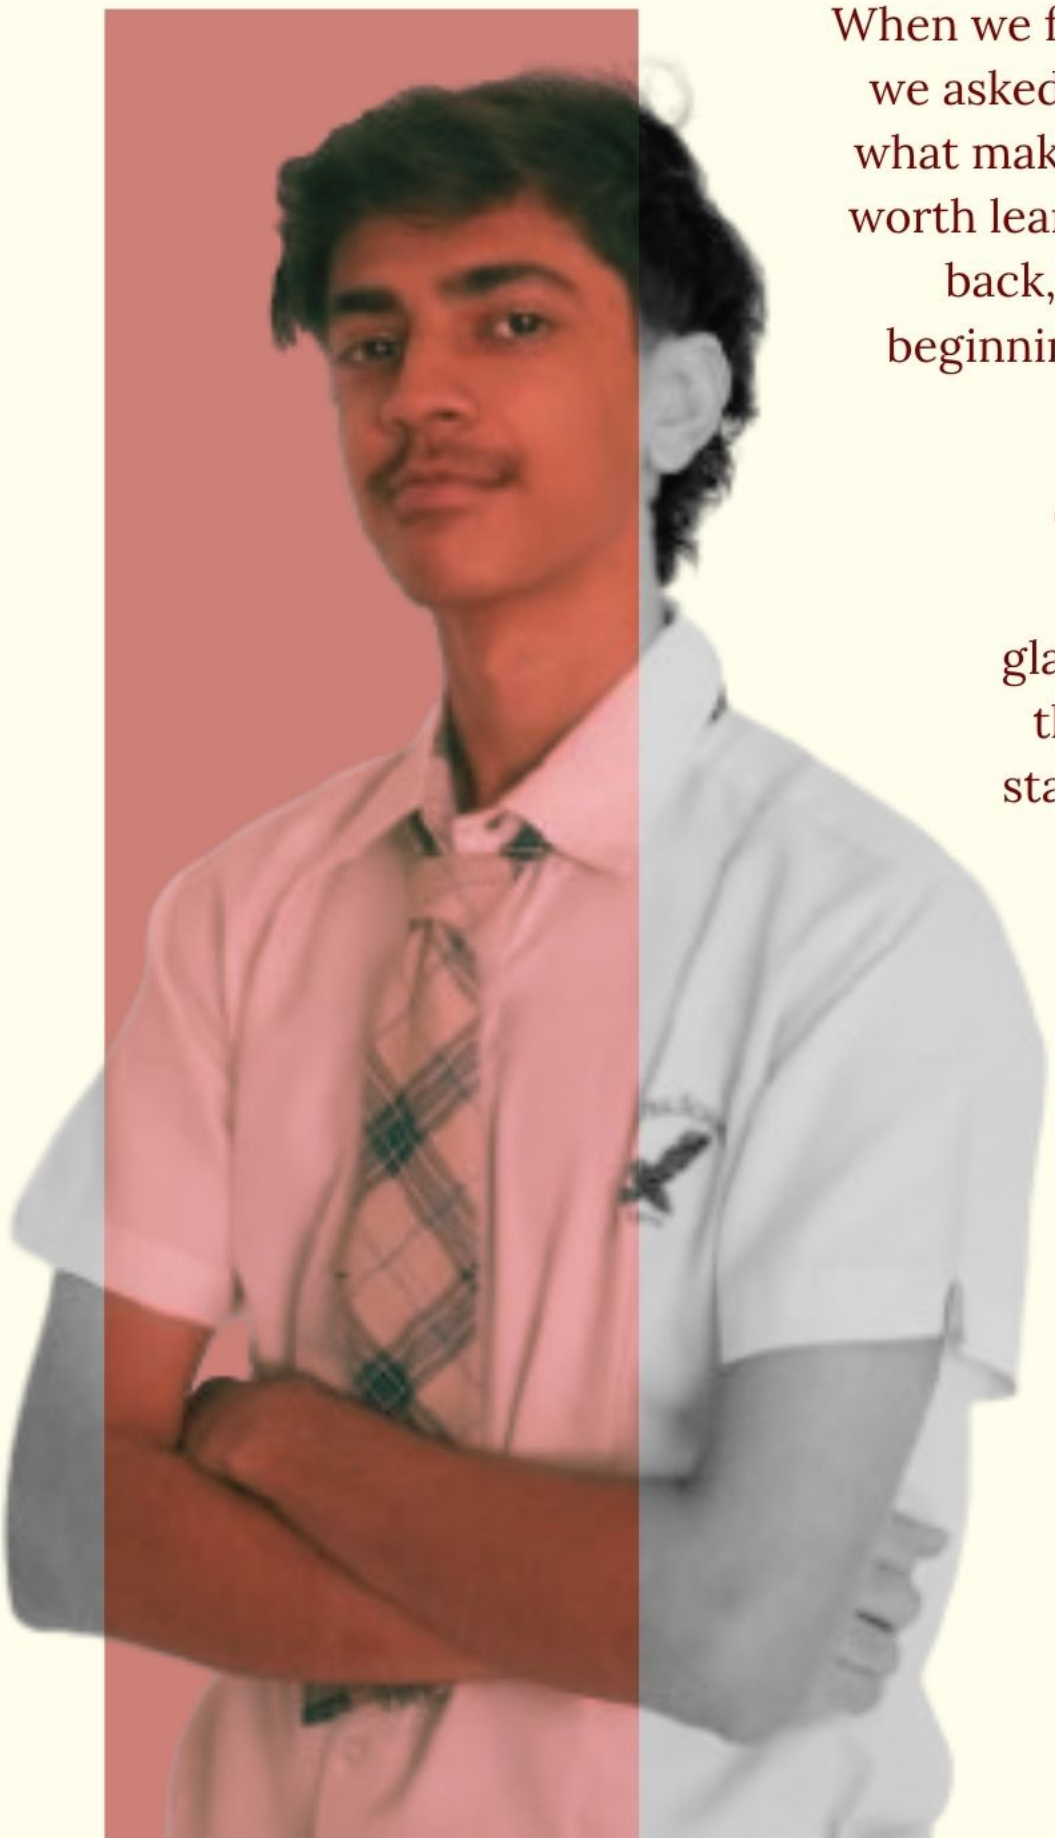

This issue celebrates every voice that fought to be heard, every idea that rose from the shadows, and every underdog who dared to dream. Design is where the shadow and spotlight meet, where quiet ideas find their loudest form.

DESIGNED BY CAROLINE JICKSON

EDITOR'S

When we first began shaping this issue, we asked ourselves a simple question: what makes someone an entrepreneur worth learning from? the answer came back, those who rise from unlikely beginnings, and those who grow into leaders of entire industries.

These identities appear to be completely different at first glance. But courage is what ties them together. The bravery to start with the odds against you, to keep going when things are unclear, and to create something that lasts.

This years theme is close to our hearts as it's not only something that reflects the lives of the amazing people that we've been able to interview, but also the journey that we're on as students and up-and-coming change-makers.

NOTE

We resonate with the toughness of the fighter that has to fight to prove themselves, and we respect the dreamer that decides to shape the future.

On these pages, you'll encounter the determination of a young footballer who turned ambition into reality, the global scope of Zubair Junjunia's ZNotes in empowering millions of students, and the legacy of Ms. Aparna Verma, the founder of Scholars International Group, whose leadership has established the standard of scale and impact.

Through these profiles, you get to look back on topics like hustle, attitude, and the responsibility of creating something more than oneself. Together they form a conversation about what it truly means to dream boldly, act with intent and lead with purpose

We wish you luck in finding a mirror for your own path. Whether you're just starting out and trying to prove yourself or you're imagining a large-scale influence, realize that both are a part of the same story: one of bravery, development, and opportunity. This magazine is our way of honoring that tale.

FROM SMALL BEGINNERS TO A NETWORK OF EXCELLENCE

When we think about the qualities that define great entrepreneurs, many ideas come to mind: creativity, leadership, ambition and innovation. These are all important, but there is one quality that often decides whether someone succeeds or gives up: resilience. Resilience is the ability to keep going when things don't work out as planned, to learn from mistakes and to adapt when situations change.

It is the steady force that keeps ideas alive, even when circumstances are difficult. An inspiring example of this is Ms. Aparna Verma, CEO of Scholars International Group and owner of Dubai Scholars Private School. Her journey is proof that resilience is not about avoiding challenges but about meeting them with strength and determination. What began as a small effort has now grown into a respected network of schools that educates thousands of students every year. This growth didn't happen easily. The education sector is constantly changing, with new reforms, new expectations and increasing competition. Running and expanding schools in this kind of environment requires more than vision alone - it requires resilience.

THE WOMAN WHO:

BUILT AN EMPIRE WHEN OTHERS SAW LIMITS.

Her efforts were recently recognised at the Being She Excellence Awards, where she received the Excellence in Education – Lifetime Achievement Award. This award was not only a celebration of her personal success, but also a recognition of the years of resilience that helped her lead schools, inspire teachers and shape the lives of countless students. The truth is, entrepreneurship is never a smooth or simple path. Ideas can face rejection, circumstances can shift suddenly and even the best plans often need to be adjusted. Creativity and vision may light the spark, but resilience is what keeps the fire burning. It is the quality that ensures every other strength has a chance to make an impact.

Call her FOUNDER of a school.
Call her LEADER.
Call her FEARLESS.

It means staying patient through setbacks, staying motivated when progress feels slow and continuing to believe in a bigger goal.

Ms. Verma's story shows exactly this. Whenever challenges came her way, she turned them into opportunities. When the education system demanded change, she embraced innovation. As new schools opened, she made sure they carried the same values of academic excellence and holistic growth as the first. Every step of her journey reflects how resilience is not only about surviving difficulties, but also about using them to grow stronger and move forward.

the woman who refused silence

She is the woman who refused silence, who chose action over comfort, who carved a space so wide that others could follow.

Ms. Verma's story leaves us with an important lesson: success is not about never facing obstacles, but about refusing to let obstacles stop you. Her journey proves that resilience is the foundation of entrepreneurship, and without it, no dream, no matter how brilliant, can become a lasting reality.

THE MINDSET THAT SCALES EVERYTHING

I've always believed in "practice before you preach." So here goes: this piece is a little different—perhaps a first from a Head of School (Gen X) trying to be relatable to Gen Z, Gen Alpha or Gen Beta. I hope you like it!
The mindset that scales everything
Entrepreneurship isn't about becoming a CEO tomorrow. It's about becoming future-ready today—calm under pressure (EQ), sharp with ideas (IQ), and great with people (SQ). Your feed can be more than a highlight reel—it can be your launch pad.

Entrepreneurs are 'creative and critical thinkers who can recognize opportunities, mobilize resources, and make things happen when the rules aren't clear.'" —Forbes.
Hey changemakers—yes, you my dear students. The world you're walking into moves at the speed of a swipe. New tools drop, trends flip, and careers get reinvented in real time. The fastest way to keep up isn't to memorize more—it's to think like an entrepreneur.

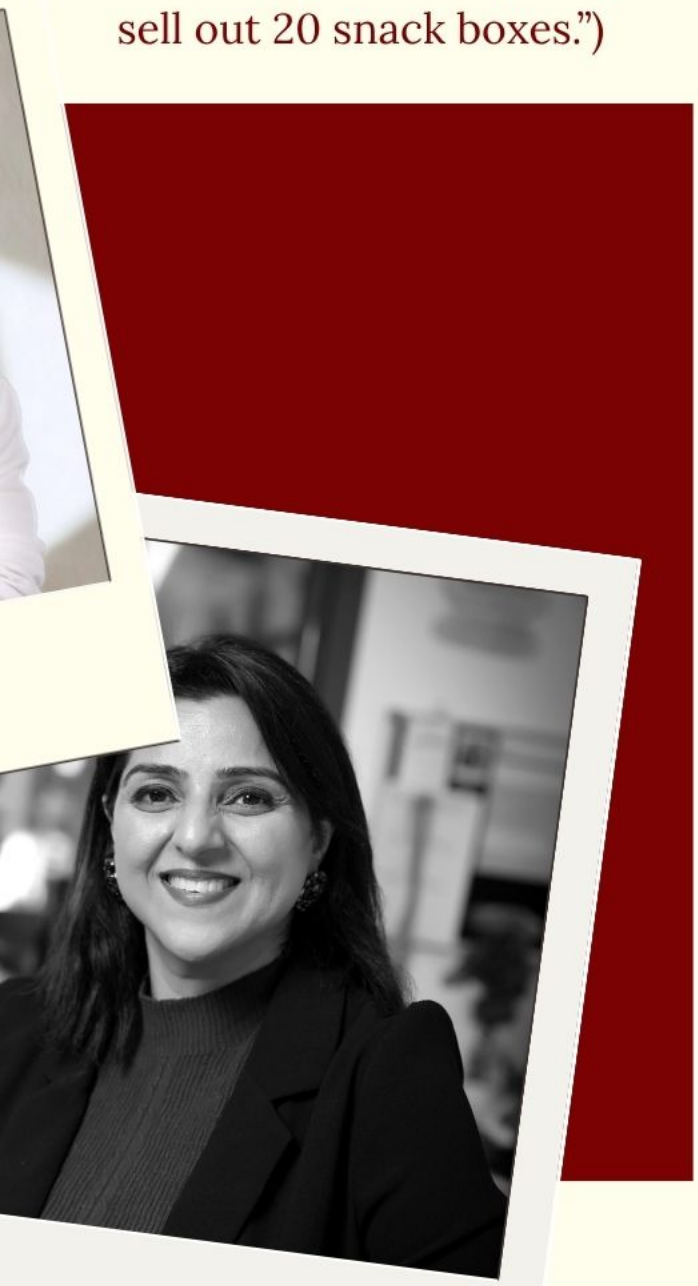

That mindset upgrades your EQ (heart), IQ (brain), and SQ (squad) so you can build projects, communities, and—most importantly—a life you're proud of. Pitching an idea to your class, posting your first Reel, getting crickets on a new project—awkward? Sure. But entrepreneurs don't hide; they iterate. Emotional intelligence is your superpower: regulate the nerves, learn from the L, and go again. Before your next presentation or post

SAPNA CHANGRANI

MINDSET

Entrepreneurial thinking isn't "knowing everything"—it's testing everything. Treat your idea like a mini science experiment:
What problem are you solving? (Be specific: "Students can't find healthy snacks after 6 p.m.")
What's your hypothesis? ("A pre-order WhatsApp list + IG pickup window will sell out 20 snack boxes.")

What's your metric? (Not likes—saves, replies, pre-orders, sign-ups.)
Curiosity > perfection. The students who win are the ones who keep asking why and what if.
Learning to pitch, negotiate, and collaborate so everyone levels up. Your DMs are a networking tool, not just memes. Try this:

- Follow 10 local creators, student clubs, or small businesses you admire.
- Leave thoughtful comments (not "cool!"—add value).
- Send one DM per week: "Loved your series on recycling hacks. Our Eco Club is piloting a refill station—want to collab on a Reel?"

That's how partnerships start—online.
To conclude advice from Gen X TO Gen YOU - no algorithm beats showing up. Show up for your idea. Start before you're ready, iterate in public, be kind and relentless. When it feels awkward, growth is loading.

I'm Gen-X; you're Gen-You—now go build the next track on this mixtape, WORK SMART, WORK HARD - we are rooting for you!.

SOHE

VA

THE MAN WHO REFUSES TO BE IGNORED

By the Beyond Ventures Team

Soheil Var's story is about more than just football; it's about fortitude, vision and creating something much greater than personal success.

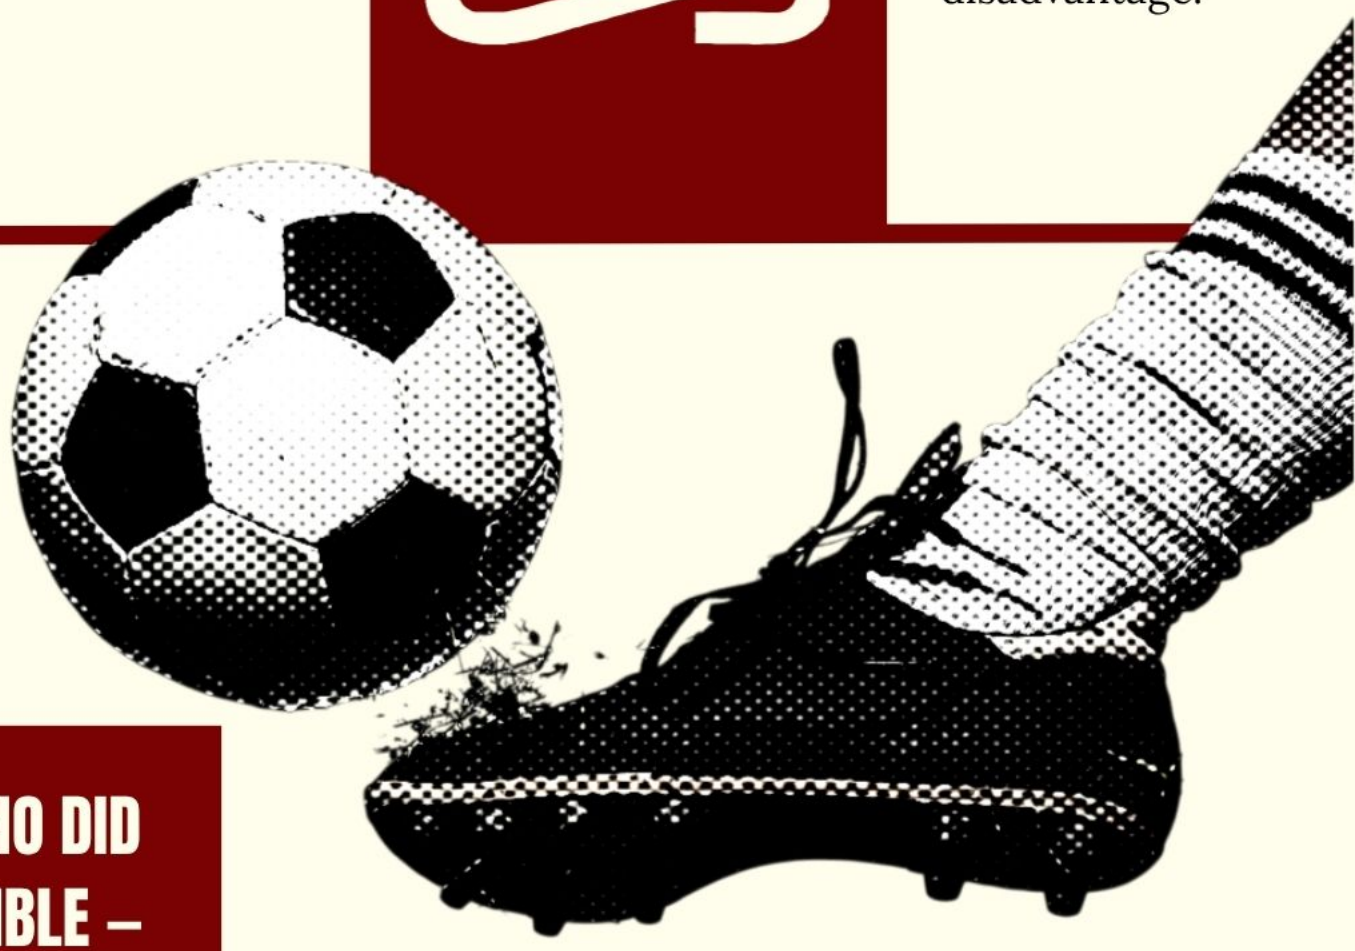

Soheil's journey was never simple. The odds were stacked against him, with early injuries threatening to halt his progress and limited access to resources. However, these difficulties turned into growth-promoting factors.

Al Qabila FC, a purpose-driven football team, is currently a vehicle for that tenacity. Al Qabila is intended to serve as a community-building, opportunity, and mentoring platform rather than merely a team. It exists to provide young players with the access, faith, and room to develop that Soheil formerly lacked. The team is a living example of his belief that athletics can empower people and fill gaps that cannot be filled by skill alone. According to Soheil, the key to success is mindset.

SOHEIL VAR

Discipline, consistency, and a readiness to accept failure as an essential component of the process are key components of his philosophy. Another theme that emerges throughout his narrative is leadership. For Soheil, being a leader is about serving others, not about having power, and upholding the principles of accountability, empathy , and humility in the face of criticism or uncertainty. By using this strategy, he has been able to encourage others to believe in themselves and create something that goes beyond personal success.

The spirit of Beyond Ventures is embodied in Soheil Var's journey: turning obstacles into opportunities and vision into impact. His narrative serves as a reminder that being the unexpected contender is frequently the very cornerstone upon which greatness is constructed, rather than a disadvantage.

THE MAN WHO DID THE IMPOSSIBLE – BUILDING SUCCESS FROM SCRATCH.

"I don't say 'I have to do this,' I reframe it as
"I get to do this.' If you become grateful for the things you get to do, everything changes."

ZUBAIR

JUNJUNIA

FOUNDER OF

ZNOTES

By the Beyond Ventures Team

NOTES TO NATIONS

He learned to ask a different question: what model actually serves learners.

"By students, for students" is more than just a tagline for ZNotes, it is the operating system Zubair Junjunia has run for a decade. At 16, while most of us were still color-coding revision timetables, Zu already building them for the world. What began as a small Facebook group of classmates passing around word documents became ZNotes, a global study platform shaped by the habits, humility, and hard edges of a teenage founder, who never waited for permission to start. Zubair's origin story is simple. He loved learning ,he loved sharing

THE MAN WHO ASKED WHAT MODEL ACTUALLY SERVES LEARNERS.

and he kept showing up. Consistency he says is the first principle. "After a few years, I could have gotten bored. At Uni, I didn't need to update biology notes while udying mathematics but countability brought me back." The second habit is craft, the notetaking, planning and preparation that is carried from GCSEs to UCL math lectures. The third is a mission. He frames education as a human right and directs everything around access, not valuations or the number of users. When hype cycles shouted "raise, scale, exit". Leadership requires unlearning.

The early top down impulse to get things done his way, on his timeline met the reality of a distributed, all student team across time zones and exam calendars. Out of those frictions came a people first operating culture. He summarizes in three designs rules. First, high ownership: let the people decide the how. Second, low dependency: do not let one person be the bottleneck. Third clarity of impact: make the line from the task to learner outcome visible.

ZUBAIR JUNJUNIA

THE MAN WHO DID THE IMPOSSIBLE – TURNING SIMPLE NOTES INTO A GLOBAL MOVEMENT.

The result is a movement architecture with context, community and growth leads who mentor their own teams, ambassadors who run their workshops with autonomy and a platform where every button and side bar has been sweated over because the experience must feel like it was built with students not merely for them.

There is a counterfactual where Zubair is in academia, deep in obscure mathematics, or working inside schools and universities. Entrepreneurship, he suggests, was never a costume he put on to chase an exit. It was the natural consequence of trying to solve a real problem and staying long enough to do it well. That is the throughline of the ZNotes decade, from Word documents to a polished platform, from a solo teenager to an ecosystem of leaders, from the metric of money raised to the metric of minds reached.

ZUBAIR JUNJUNIA

NOTES

What happens when education goes beyond borders?

ction, nase progress. That's how real growth happens"

POWER & DUTY

Giants aren't defined only by their scale, but by the choices they make with that scale. With every achievement comes a duty to guide, uplift, and leave a lasting impact.

THE RESPONSIBILITY OF GIANTS

SHARP. STRATEGIC. STRONG.

Becoming an industry giant is not just about growth, it's about what you do with it. With influence comes responsibility and history shows that the bigger the platform, the greater the impact on people, communities and the planet.

FROM CONCEPT TO REALITY

For companies like Apple, Amazon, and Google success is no longer just measured in profits. Their products shape our daily lives and with that power comes greater responsibility - to protect privacy, ensure fair competition and build technology that serves society and instead of exploiting it.

Nike and Starbucks, who were once underdogs themselves, also remind us that giants face constant pressure.

They must show that supply chains are ethical, workers are treated fairly, and sustainability is more than just a buzz word.

EMPOWERED A GENERATION TO RISE.

The scale that makes them giants also magnifies their mistakes.

POWER AND RESPONSIBILITY
POWER AND RESPONSIBILITY
POWER AND RESPONSIBILITY
POWER AND RESPONSIBILITY
POWER AND RESPONSIBILITY

But responsibility is not just about the risk, it's about the opportunity. Industry Giants are positioned in such a way that they have the ability to tackle global challenges that smaller firms can't. Tesla, for instance, did more than just build cars, it accelerated a global shift towards clean energy.

Giants can lead the way in climate solutions, accessible education and inclusive work cultures.

At their best, Giants understand that their legacy will not be defined by how much they grew, but by how much good they contributed to. The responsibility of giants is not to stand above the rest, but to use their height to lift others.

MORE THAN SUCCESS

The story of underdogs becoming giants is inspiring. But the question is once you are a giant, how will you use your weight in profit, in power and in influence for a better world?

GIANTS

From saving bus fare to steering my dream Mini Copper

A 'MINI' START, A MEGA JOURNEY

TABREZ MANDVIWALA

Growing up in a family of seven in a single-room studio apartment, I understood very early what it meant to live with limited means. My parents prioritized education above everything else, and that became our guiding light. Yet, as I stepped into college, it became clear that my father's weekly pocket allowance of ₹70 (≈ AED 2.90) would not cover the little aspirations of a teenager, a canteen snack, a movie, or even the independence of owning my own phone.

I knew I had to find a way.

There were days I walked home from college, not because I enjoyed the stroll, but because taking the bus meant giving up the money I needed for lunch. It was during those long walks that I promised myself one day I wouldn't just be able to afford bus fare, but something much bigger. Years later, when I bought myself a Mini Cooper, the same car I had admired as a child after watching it in a movie, I realized I had lived that promise.

The First Hustle

With some gift money I received after passing Year 10, I bought a second-hand mobile phone. Soon after, online marketplaces like OLX and Quikr were beginning to gain traction in India, much like eBay in the West. Armed with nothing more than my phone and a simple script I prepared for buyers, I listed the device online. Within two days and a few tough negotiations, I sold it, making my first profit of ₹200 (≈ AED 8.30).

That moment changed everything.

Instead of spending the money, I reinvested. I bought another phone, sold it again, and repeated the cycle. By the end of Year 11, I had built a small revolving trade, owning multiple devices at once. For the first time, I could pay for my own college canteen lunches, catch a movie or two each month, and, most importantly, feel the confidence of earning my own way. I realized a fundamental truth: money attracts money if you keep it moving.

The Leap into Events and Customization

College life also brought me into the Rotaract movement. First with RCHC, and later with RCC, one of the largest and most active clubs in Mumbai with nearly 400 members.

When new members joined, they received kits filled with customized items: T-shirts, pins, diaries, stationery. Being part of the organizing committees, I got a behind-the-scenes view of the sheer logistics and costs of running such a club. RCC alone hosted about 200 events a year. Each event required something unique: trophies, plaques, banners, stamps, menus, certificates, and more.

I began quietly noting everything. Prices, suppliers, quality, timelines. I spent months meeting wholesalers and understanding how the entire supply chain worked. Then came the big realization: if one club needed all this, imagine the scale across Mumbai's 100-plus Rotaract clubs.

That was when I decided to take the plunge.

RLS Event Solutions Is Born

As a new Rotaract year approached, I launched my first formal entrepreneurial venture: RLS Event Solutions. The idea was simple but powerful — provide customized solutions for everything an event or organization might need.

I began with personal contacts and social media, leveraging trust within the Rotaract community. Orders grew quickly. What started with T-shirts, pins, and trophies soon expanded to providing printing solutions, menus, stationery, and branding support for salons, restaurants, schools, and even malls.

Within months, RLS was generating over ₹1,00,000–1,50,000 per month (≈ AED 4,140–6,210). That venture not only helped me fund my master's degree but also allowed me to improve the quality of life for my family, support my younger siblings, and break free from the cycle of scarcity.

Though I eventually stepped away to pursue my passion for teaching, RLS remains a registered trademark, currently managed by my co-partner. It continues to stand as a reminder of how curiosity and hustle can turn small beginnings into sustainable ventures.

Beyond Myself: Inspiring a Legacy

What I cherish most isn't just my journey, but the ripple it created. My drive inspired my siblings to start TCE, an influencer marketing firm now spanning India, UAE, US, China, Indonesia, and the Philippines, partnering with YouTube and TikTok.

From walking home to save bus fare to owning a Mini Cooper, my journey proves that hustle and resilience can turn small opportunities into lifelong transformations.

Young Visionaries

Heyy! I'm Juan Dsouza, 16 and in Year 12 at DSPS. My love for cars quickly turned into a passion for photography —I mean, my first word was literally "Cars," so it was bound to happen. Once I got my first phone, I started taking pictures of everything, eventually focusing on cars and drawing inspiration from artists like Larry Chen and LifeThroughOptics. Over time, I've worked hard on color grading, angles, and composition, which led to becoming runner-up in a Porsche Middle East contest and building my portfolio through events. Today, I'm chasing my passion for cars and photography, hoping to inspire others the way I was inspired.

Juan Dsouza

KAMILLA SABODOSH

HER JOURNEY

Hello!! My name is Kamilla, I am the owner of Mak DXB. What inspired me to create a small business out of my work is my love for spreading joy with everyone through art, as mentioned in my slogan (made with love, for love). From the biggest bouquets, to the smallest toy, each one has its own meaning, and a lot of value as all of it is customized to one's liking, leaving no space for dissatisfaction. A lot of challenges came along the way, especially with prices and payments/ delivery. Delivery costs are too high, so a bit of effort is done to personally meet my customers and drop it off. It may sound boring, but it is rewarding to see them happy with their orders. Although some may see my price to undermine my work, I feel that it shouldn't matter, as all the hard-work pays off through customer satisfaction and them sharing their orders with others.

AAZEEN ANISH

HER JOURNEY

The word adorn means to beautify or decorate something. I was always in love with the idea of making something more attractive and eye catching which is what started my bracelet business “adorn”. Driven by my love for creating unique, hand-made pieces that allowed me to express creativity and share it with others. One strategy that I was very persistent about was not marketing or selling my products aggressively , as I wanted my work to speak for itself. This did happen, as all my orders were through word of mouth. Each happy customer brought in the next one and many happy repeated customers too. One of my biggest challenges was balancing schoolwork with running the business .From late nights fulfilling orders after finishing homework, managing social media, and learning how to handle customers. But each challenge pushed me into becoming better and seeing people actually wear and enjoy my pieces kept me motivated.

KALEIGH LEWIS

CHASING DREAMS

My name is Kaleigh, and I am the founder of Beads by Kaleigh, a small jewelry-making business. I've loved creating bracelets ever since I was a kid, so turning that passion into a business felt natural. My biggest inspiration has been my mom, who runs her own company and showed me the value of following your dreams. One of the main challenges I faced was getting the word out and producing media to promote my work, but overcoming those obstacles has made my journey even more rewarding.

MAINA PESH

HER PASSION

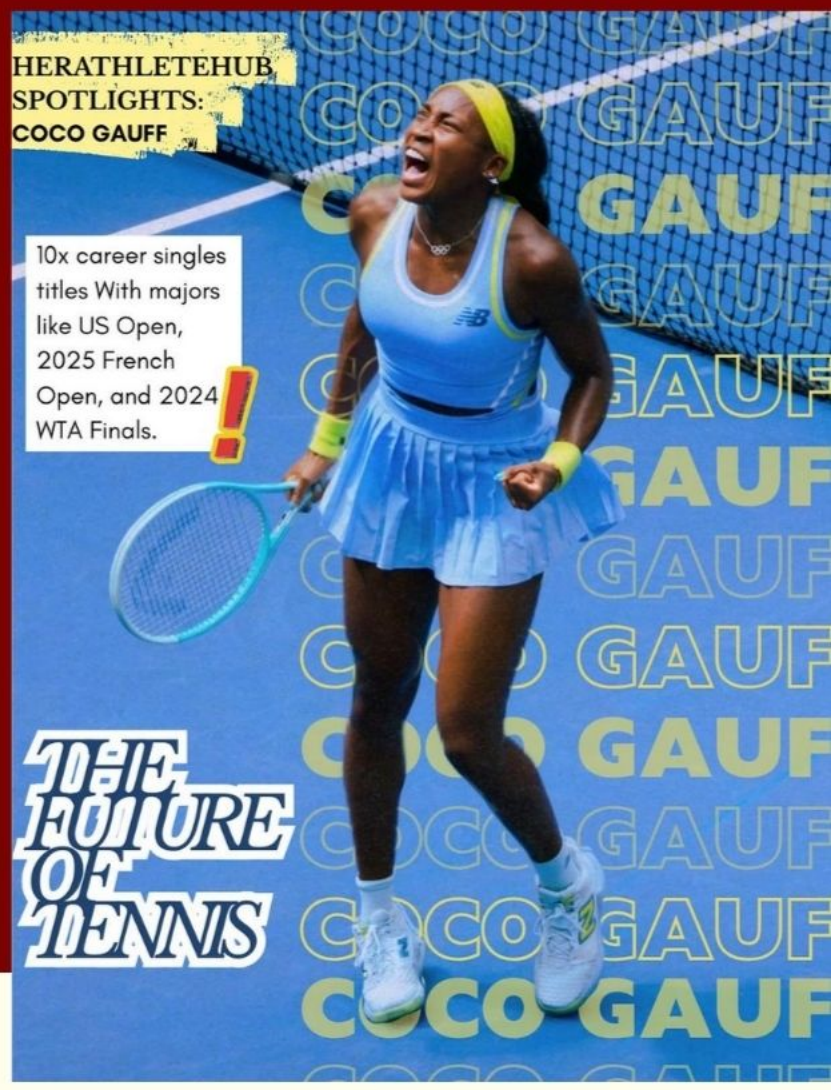

Her AthleteHub was born out of a simple idea my friend and I shared, we both loved sports but felt there wasn't a platform that truly highlighted women athletes in a way that inspired us.

I saw plenty of newsletters and accounts online, but none that connected with me as an athlete in sports myself.

That gap motivated us to create something different: a space that celebrates female athletes, shares their stories, and breaks down the barriers and stereotypes around women in sports.

Of course, starting something new hasn't been without challenges from building a team to finding the right content and making sure our message reaches people.

But those challenges also fuel us, because every step forward shows how important it is to create a platform where women in sports are not just noticed, but celebrated.

WHEN UNDERDOGS BECOME GIANTS

Every giant was once an underdog. Before billion dollar valuations and the global influence, many of today's household names started in garages, dorms, rooms, or tiny apartments. Their journey shows that scale is not, it is built on persistence, vision, and the courage to keep going when the odds say otherwise.

Apple began with two friends in a garage, assembling computers by hand, they were laughed off compared to IBM. Today it's the world's most valuable company.

Amazon started in Jeff Bezos's garage as an online bookstore. Critics mocked the idea of buying books online. Now it's the backbone of global e-commerce and cloud technology.

Netflix used to mail DVDs when Blockbuster ruled Friday nights. The giant they had challenged silenced them. Netflix responded by transforming how the world views entertainment.

Nike, wants Blue Ribbon Sports, started by selling shoes out of a car. From that hustle, it grew into the world's most iconic sportswear brand.

Airbnb began with two designers, renting out air mattresses to pay rent. Investors laughed at the idea of strangers, staying in strangers' homes. Today it has redefined how millions travel.
These stories remind us that giants are not born, they are made. They are made from underdogs who stayed long enough in the fight to outlast their doubts, sharpen their ideas and turn setbacks into fuel.

In entrepreneurship, the line between an underdog and a giant is thin. Today's small project could be tomorrow's global platform. The question is not if an underdog can become a giant, but which of today's underdogs will be tomorrow's legends.

EVERY TRAILBLAZER WAS ONCE AN UNDERDOG WHO REFUSED TO GIVE UP

By Chanchal Sirohi, Head of Commerce and Computing Department, Dubai Scholars Private School

In every classroom, boardroom, or startup garage, there's an underdog quietly working toward something bigger. This underdog could be you, or someone you know. Their ideas may be doubted, their confidence may waver, but their determination remains unwavering. History — and indeed, our own experiences — remind us that every trailblazer begins as an underdog who simply doesn't give up.

Success stories often look effortless from the outside. We see the awards, the applause, and the headlines. But what we don't see are the endless drafts, the sleepless nights, and the quiet moments of self-doubt. Behind every achievement is a person who was once told, "You can't." Think of some of the most transformative names in business and innovation.

Elon Musk was dismissed as unrealistic when he imagined electric cars and reusable rockets.

Colonel Sanders faced over a thousand rejections before KFC became a global brand. His story is a testament to the power of resilience in the face of rejection. It's not about how many times you get knocked down, but how many times you get back up that truly matters.

They weren't born successful — they became successful by staying committed when it would have been easier to quit

Lessons from the Classroom:

I've witnessed that same determination among our own students. A few years ago, a group of Year 12 learners entered an interschool business challenge with an idea that didn't quite convince the judges. Their first presentation lacked polish, and their data had gaps. But instead of walking away disappointed, they chose to start again — staying back after school, refining their concept, improving their visuals, and even reaching out to real businesses for market insights.

When they completed the following term, their hard work spoke for itself. This time, their idea didn't just earn recognition — it won. That victory became more than a trophy; it sparked an even greater vision. The same students went on to launch our very own interschool business competition at Dubai Scholars — the DS Venturist. Their initiative not only gave future innovators a platform to dream, design, and deliver, but also inspired the entire school community with their resilience and determination.

From Underdog to Trailblazer:

What separates a trailblazer from everyone else isn't luck or talent — it's resilience. It's that inner voice that says, "Maybe not yet, but soon." It's the persistence that keeps you going, even when the odds seem insurmountable, that truly leads to success.
In the world of business, resilience is the most valuable currency. Markets crash, ideas fail, strategies flop — but those who persist, who analyse their mistakes and pivot with purpose, are the ones who ultimately make a difference.

At Dubai Scholars, we nurture this mindset every day. Whether through the DS Venturists, sustainability projects, or enterprise challenges, our learners are encouraged not just to win, but to grow — to see every setback as an invitation to think differently. Remember, it's not about how many times you fall, but how you rise and learn from each fall that truly defines your success.

SIGNING OFF

ENTREPRENUERSHIP FOR A BETTER WORLD

We live in a world which has many imperfections. Poverty, climate change, corruption, unemployment - these are words that carry so much weight and show up on the front pages of newspapers, inspiring daily readers to “make a change” and “make a difference.” And yet, reading about problems is easy. Trying to actively solve them is where the challenge lies.

Entrepreneurship pushes people to take action and work towards a better tomorrow. Being an entrepreneur isn’t what the stereotype confines it to be. It’s not just about making money, even though people often picture

entrepreneurs as flashy CEOs in suits, running big companies, or “born geniuses” who succeed overnight. True entrepreneurship is about venturing into the unknown and fulfilling what those newspaper headlines keep asking of us: to actually make a difference in the world.

WE END AS WE BEGAN – LOUD.

ENTREPRENEURSHIP, IN ITS TRUEST FORM, IS PROBLEM-SOLVING WITH PURPOSE. IT’S ABOUT SPOTTING GAPS IN SOCIETY AND CREATING SOLUTIONS THAT CHALLENGE THE STATUS QUO. AROUND THE GLOBE, SOME OF THE GREATEST INNOVATIONS HAVE COME FROM PEOPLE WHO WEREN’T AFRAID TO TAKE THAT LEAP. FROM RENEWABLE ENERGY STARTUPS TACKLING CLIMATE CHANGE TO SOCIAL ENTERPRISES HELPING CHILDREN ACCESS EDUCATION – ENTREPRENEURSHIP IS THE DRIVING FORCE BEHIND PROGRESS.
AT BEYOND VENTURES MAGAZINE, WE BELIEVE ENTREPRENEURSHIP IS MORE THAN JUST A CAREER PATH; IT’S A MINDSET. EVERY ISSUE WE PUBLISH SHINES A LIGHT ON PEOPLE WHO REFUSE TO SIT BACK AND WAIT FOR CHANGE — THEY CREATE IT. BECAUSE IN A WORLD FILLED WITH IMPERFECTIONS, ENTREPRENEURS PROVE THAT SOLUTIONS DON’T JUST COME FROM GOVERNMENTS OR CORPORATIONS. THEY CAN START WITH ANY OF US.
